

LENIN P (He / Him)

Software Engineer

+91-8056409782 LinkedIn

mailtoleninjoseph@gmail.com

Professional Summary:

Senior Software Engineer with 10+ years of experience in software development, backend engineering, web application development, and application integration. Experienced in **JavaScript, React.js and Python,** with knowledge of FastAPI and Django for backend development, system integration, and application maintenance. Skilled in debugging, database operations, and troubleshooting application issues. Currently learning Generative AI technologies, including **LangChain, LangGraph, and CrewAI,** with a focus on understanding and developing Retrieval-Augmented Generation (RAG) applications and agentic AI workflows. Eager to leverage existing software engineering expertise while building practical skills in AI-powered application development.

Skills:

- Generative AI: **LangChain, LangGraph, CrewAI**
- Programming Languages: **Python, JavaScript, Java** (Learner)
- Web Development: **JavaScript, TypeScript, Node JS, React JS, Kraken Js, Apps Script REST API, Microservices, Fast API, Graphql, HTML, CSS**
- Frameworks and Libraries: **Django, Fast API, Flask, React JS, Next JS, Nest JS, Knex JS, Prisma ORM, PySide.**
- Database Technologies: **MySql, PlSql, Dynamo DB, Mongo DB**
- Messaging & Containerization: **RabbitMQ, Docker**
- Version Control: **GIT**
- Cloud Technologies: **AWS** (S3, Lambda, SQS, SNS)
- Development Methodologies: **Agile (Kanban, Scrum), Waterfall**
- Team Collaboration:
  - Led cross-functional teams to successfully complete projects, leveraging strong collaboration skills and promoting open communication.
  - Actively listened to team members' input, incorporating their feedback and suggestions to enhance project outcomes and build a sense of ownership.
  - Built strong relationships with stakeholders, fostering collaboration and alignment toward common goals and objectives
  - Mentored and supported team members, fostering their growth and development and creating a collaborative and supportive work culture.
  - Participated in cross-team initiatives to share knowledge, experiences, and best practices, promoting collaboration and fostering a culture of continuous improvement.

Professional Experience:

Lead Software Engineer

Optimum Infosystem , Chennai — Jun 2025 - Present

- **Software Engineer | PayPal**
  - Developed and enhanced a PayPal web application feature to integrate merchants with PayPal accounts, enabling secure and seamless transaction processing.
  - Built both frontend and backend components using **Kraken.js**, PayPal's internal framework built on Express.js, ensuring scalable and maintainable application architecture.
  - Carried out **R&D** on integrating the **EUDI Wallet** (EU Digital Identity Wallet) with PayPal's web application.
  - Exploring integration of **AI** capabilities into backend systems
  - Built a **RAG-based AI** assistant using LangChain to answer domain-specific queries
  - Implemented **Claude Skills** to package reusable, AI-assisted workflows for the team.
  - Monitored, analyzed, and debugged production transaction issues using application logs and database records; prepared detailed root cause analysis reports to support issue resolution.
  - Began contributing to a PayPal backend **Java (Maven) project**, gaining hands-on experience with Java-based enterprise systems and backend service development.
  - **Tech Stack:** Kraken.js (Express.js), Node.js, JavaScript, Java (Maven), LangChain, RAG, Claude Skills, EUDI Wallet

Software Development Associate Manager

accenture, Chennai — Oct 2024 - May 2025

- **Developing Web Application**
  - Leading both the front-end and back-end development teams, overseeing project deliverables, and ensuring alignment with business goals.
  - Managing the front-end team focused on building scalable and responsive applications using ***React.js***, while also guiding the back-end team in developing robust solutions using ***Python (Fast API)***.
  - Designing, developing, and maintaining scalable Python-based microservices, integrating cloud-native solutions with *AWS* services such as *Lambda, S3, and DynamoDB* to ensure high availability and performance.
  - *Implementing and maintaining new UI/UX designs by guiding the front-end team in following best practices in React.js development, ensuring clean architecture and maintainable codebases.*
  - *Collaborating with cross-functional teams, product owners, and designers to ensure smooth end-to-end application delivery.*
  - *Initiated exploration of AI-driven automation for internal workflows*
- ***Developer Portal Development:***
  - *Designed and developed a Developer Portal using React.js, providing an intuitive and responsive user interface for external and internal developers.*
  - *Integrated comprehensive API documentation within the portal, allowing users to easily explore available APIs, their endpoints, and usage guidelines.*
  - *Implemented secure token generation functionality, enabling developers to authenticate and authorize their API access directly through the portal.*
  - *Built interactive API testing features within the portal, allowing users to test endpoints in real time with customizable parameters and immediate response visualization.*

- **Tech Stack:** Python (FastAPI), React.js, AWS (Lambda, S3, DynamoDB)

Software Developer

BOT VFX, Chennai — Jun 2020 - Oct 2024

- **Developed In-House Web Application (S2)**
  - In-house applications are essential for helping companies streamline operations and address specific business needs.
  - I developed this application using ***React, Next.js and TypeScript*** on the frontend and ***Node.js (NestJS)*** on the backend, and deployed it on an ***AWS EC2*** instance.
  - Additionally, I designed and implemented robust data models to support the application's planning, structure, and functionality.
  - Used **RabbitMQ** for message queuing, **Docker** to back up the internal application, and monitored services with **k9s, Grafana and Prometheus**.
  - **Frontend:** React.js, Next.js, TypeScript, TanStack libraries, Material UI, Storybook, Vite, Styled Components
  - **Backend:** Node.js (NestJS), Python (FastAPI for internal apps), Knex.js (database connection), Prisma ORM
  - **Database:** MySQL, NoSQL (MongoDB for internal communication)
  - **DevOps & Monitoring:** RabbitMQ, Docker, k9s, Grafana, Prometheus
- **Pipeline VFX Development:**
  - Developed and enhanced VFX production pipeline tools using **Python** and **PySide**, creating custom user interfaces to streamline artist workflows.
  - Built intuitive desktop applications for task automation, asset management, and shot tracking, reducing manual effort and improving production efficiency.
  - Integrated pipeline tools with existing production tracking systems (e.g., Autodesk Flow Production Tracking i.e **ShotGrid**) to enable seamless data synchronization and status updates.
  - Focused on building scalable, modular tools that could easily adapt to evolving studio requirements and new show-specific workflows.
  - Collaborated closely with production, artist, and technology teams to gather requirements and deliver user-centric solutions for everyday production challenges.
- **Integration Between Applications**
  - S2 and ShotGrid Integration: Integrated Autodesk's Flow Production Tracking (ShotGrid) application with our in-house application (S2) using **Node.js** and **Python.**
  - S2 and HRMS Integration: Integrated the **HRMS** application (**Keka**) and the **Nuke API** with S2 using **Node.js**.
- **Data Analysis and Workflow Automation:**
  - Analyzed client-provided requirements, understanding the folder structures, task types, and delivery specifications to plan data organization and workflow strategies.
  - Developed Python scripts to automate the extraction of project metadata, including shot details, task assignments, and file structures.
  - Automated the movement of validated shots and assets to the production storage server, dynamically creating company-standard directory structures for consistent data management.
  - Ensured accuracy and compliance with internal production standards while streamlining manual processes, significantly reducing setup time and minimizing human errors.
- **Developed Document Browser**
  - Developed a Document Browser application that helps to serve documents on the internal network by using **Next JS** and **Mongo DB**.
  - And also developed Automation Scripts to sync the documents from Google Drive.

- **Email Signature Generator & Paste Board**
  - Built an **Email Signature Generator** to create consistent, company-standard email signatures.
  - Built **Paste Board**, an internal tool for sharing content across the team.
- **Google API**
  - Developed the Scripts to interact with the **Google API** to get or update the data.
- **Apps Script & Apps Sheet**
  - Developed numerous Apps Script to generate or update data in Google Sheets based on the required logic.
  - Simultaneously update a Google Sheet by retrieving data from a REST API using **Apps Script.**
  - Sometimes, we need a small application to manage data, and that's where I create App Sheets comes into play.
  - By using App Sheet, I created multiple Applications based on the requested person's needs. Such as Employee performance recorder, Task scheduler, and Visitor information recorder.

Software Engineer

QRS QR Solutions, Tiruchirappalli — Oct 2019- Mar 2020

- **Developed CRM Application**
  - Developed a web-based customer portal for an Australian client named New Age Caravans using **Python, Django**.
  - Converted all the codes from Python 2 to Python 3.
  - Implemented logging to audit and maintain the history of data for the above customer portal in **MySQL**.
  - **Tech Stack:** Python, Django, MySQL

Application Management Engineer

Wipro Technologies, Chennai — Apr 2018- Sep 2019

- Developed PL/SQL queries for audit management at YesBank, which helped reduce manual work by 85%.
- Assisted in retrieving data from the Oracle Database for banking data analysis.
- Handled over 8 banking applications and successfully resolved various issues within those applications.

Content Analyst

Melon Ventures, Chennai — Apr 2017- Oct 2017

- Managed 30% of the content outflow for the Fresherslive Website.
- Designed documents using the Adobe InDesign application.

Web Developer

DnC Stdio, Tiruchirappalli — 2015 - 2017

- Single-handedly developed static websites for various corporate clients.
- Managed the MySQL database for the legacy college management systems.

Education:

Bachelor of Engineering
Electronics and Communication
P.R.Engineering College
Thanjavur

Aug 2011 - May 2015

Personal Details:

Name	Lenin P
Mobile	+91 8056409782
Address	Chennai, Tamilnadu, India
